Your Register Balance—The Daily Reckoning!

Batching—A relic of the past

- Batching is an old practice.
- In the past, each night, stores would “close the till” for each checkout station by manually “batching out” the till’s data and sales history.
- Technology has made batching obsolete.
- Today, Paladin Point of Sale processes your sales data in real time. Each morning, your “till” starts fresh, “auto-magically”. Long gone are the days of batching.

Our next webinar

The Min/Display Mystery

Tuesday, March 14th, 2017 @ 9:00 am PST

Note: This next webinar is two weeks from today.
Starting in March, we will give webinars twice a month.

The Min/Display field is the most misunderstood setting in Paladin Point of Sale. Our presenter will show you how this field can help you keep plenty of “project items” (PVC fittings, switchplate & outlet covers, etc.) on hand for your contractors even though the data shows you only sell a few each week.
