

NPLEx & Paladin POS

Preventing the creation of Methamphetamine

A real-time solution to track and prevent the creation of illegal substances.

Pharmacies are challenged with preventing the creation of harmful substances, and keeping up with the frequent compliance changes. “One of the most significant challenges facing communities across America is the illegal manufacturing of [meth].¹” Federal legislation requires pharmacies to keep careful track of pseudoephedrine (PSE) products due to their use illegal meth. Products such as allergy and cold medicine often include the PSE ingredient, and are typically targeted medications for meth manufacturing. PSE product purchase recording allows review by law enforcement agencies to meet these legislative requirements.

Transactions involving pseudoephedrine products must be recorded. When done manually, it is a time consuming task. With Paladin and NPLEx (National Precursor Log Exchange), your POS system provides a quick solution that doesn't require hours of logging and reporting. NPLEx offers a “real-time electronic monitoring of precursor purchases¹” that “helps law enforcement track down individuals who purchase over legal limits.¹” Paladin POS makes compliancy and PSE tracking simple.

Value

Paladin integrated with NPLEx in early 2012, and proudly supports the legislations and compliancy laws that pharmacists are held to. After the integration, Paladin became a stronger POS solution for pharmacies across the nation.

NPLEx is used to track and record the purchases of precursor products millions of times each day. “A small percentage of people buy [PSE] medications with the intent of diverting a component into [meth],¹” and it has fallen on the pharmacists to make sure individuals don't purchase more than the allotted allowance.

Let Paladin POS system take care of compliancy for you. Paladin and NPLEx strengthen your business, eliminate the manual purchase logs, and keep your pharmacy compliant.

Features

The Paladin POS and NPLeX solution meet all the requirements for PSE product accounting and reporting. When a transaction exceeds the limits, a warning message is immediately brought up to suggest a cancelation of the sale. NPLeX offers a real-time tracking service that is included in your Paladin system.

Other features include:

- Electronic signature capture and storage
- Real-time product monitoring
- Automatic updates

Benefits

With meth precursor tracking built into your Paladin system, you receive real-time information keeping your pharmacy compliant. NPLeX is run through the web, and does not require any additional purchases. The only requirement to track PSE products is an internet connection. The Paladin POS and NPLeX interface eliminates recording errors and saves time with point of purchase recording. Automatically keep track of PSE products with items scanned by your point of sale.

Other benefits include:

- NPLeX integration
- HIPAA compliance

The Paladin Advantage:

- Improved customer checkout experience
- Real-time warnings and reports
- More time for patient care
- Affordable

If you have questions about the NPLeX and Paladin POS integration, contact us at 1-800-725-2346 or [click here](#) to email us. We look forward to hearing from you.
