PK Software & Paladin POS

Simplify pharmacy management

Run your pharmacy with software that manages data for you.

It's stressful for pharmacists to maintain the multitude of compliancy standards and data management requirements that come with running a pharmacy. These time-consuming tasks can be much simpler through your POS system. Let Paladin POS and PK Software take care of the technical aspects of your pharmacy compliancy standards without all the hassle.

The Compounder was developed by Paul Klomp RPh., a pharmacist of more than 20 years [1]. In 2010 PK Software, Inc. was acquired by PCCA, a compounding distributor and supplier. PCCA's - PK Software is the first choice when it comes to pharmacy compounding.

Value

The Compounder "is used daily by hundreds of compounding pharmacies across the country.[1]" Founded in 1989, PK continually strives to provide quality software for pharmacists and compounding pharmacies that want to increase their efficiencies by leveraging automation.

Paladin proudly integrated with PK Software in 2009. The integration of PK with Paladin POS extended the capabilities of handling compliancy, accounting, and better patient care. PK offers plenty of convenient features that simplify your pharmacy and allow you to focus on improving your practice and your healthcare offerings.

Features

The Paladin POS and PK Software integration offers a bi-directional interface that supports the transfer of patient information, prescription numbers, and co-pay amounts from The Compounder Rx to Paladin POS at the checkout counter. When the prescription label is scanned, the script number, cost, and signature requirements are immediately transferred to

1 This information is from PK Software website.

Paladin POS. Once the transaction is complete the information is then transmitted back to PK for storage and reporting purposes.

One of the most valued features of the integration is giving pharmacists a method to generate a "Filled" versus "Picked up" report in The Compounder Rx. This report is available at the push of a button. In addition, their pharmacy system compliancy is stronger as signatures are captured in the Paladin POS System at checkout and transmitted to The Compounder Rx for permanent storage. A HIPPA privacy act signature is only collected once, or when the PK system requests it from Paladin.

Features include:

- Signatures are stored with the prescription in The Compounder Rx for easy tracking
- Simple view of "Filled" vs. "Picked Up" prescription reports
- Single source lookup for all prescription transactions and details

Benefits

Paladin is fully integrated with PK software. The program works smoothly in the pharmacy with the goal of simplifying your workplace. Using The Compounder Rx integrated with the Paladin system helps you fill prescriptions more effectively and save time by managing your prescription pricing information and compliances. Acquire more time for efficient healthcare by using software that takes care of the gritty details.

The Paladin Advantage:

- Maintain regulated compliancy at checkout
- Real-time integration with prescription labels, prices and signature capture
- Faster checkout improving the customer buying experience
